Contents:

1	Getting started	3
2	Indices and tables	5

A CLI tool that infers a next version number for Git repos. It does its magic by looking at the commit messages of commits made since the last tag that had a [semver](#) in it. For this to work properly, your commits should following the [Conventional Commits](#) spec.

CHAPTER 1

Getting started

Requires Git 2.0+.

To use the tool:

- `pip install --upgrade chronos-cli`
- Change into a Git repo.
- `chronos infer`

To bootstrap a development environment (after you've cloned the repo and changed into it):

- `pip install --upgrade pipenv`
- `pipenv sync --dev`

CHAPTER 2

Indices and tables

- `genindex`
- `search`
